

Tradenet Portal Supported Browsers

Below there is a List Of the Supported Browsers with Tradenet V5.3

Updates to Browser Versions

Chrome and Firefox release updated versions of their software on a regular basis (Chrome typically releases a new version for Windows approximately every six weeks). Consequently the versions of any browser and operating system that are supported will change over time, and will be reflected within accordingly. From Portal 5.3 the principle with regards to browser support and testing will be that the current release of Portal being built will be tested against the latest version of browser and OS combinations, with prior versions of browsers and operating systems being supported only. Whilst a version of Portal is within standard support, more current browser / OS combinations will be supported, with issues rectified based upon case severity.

Supported Browsers

Software PORTAL 5.3 DRAFT			
Operating System	Version	Windows Vista	Windows 7
Browser			
Chrome	33	S	S
	34	S	S
Firefox	24 ESR	S	S
	29	S	S
Internet Explorer	9	S	S
	10	S	S
	11		S
S = Supported Combination (Note Windows XP no longer officially supported from this version)
